TREATMENT OF:

- Sun Spots
- Rosacea
- Port Wine Stain
- Skin Discolorations
- Pigmentation
- Skin Redness
- Acne
- Tightens Skin

WHAT IS IPL?

An IPL (Intense Pulsed Light) device uses broad-spectrum light to target and treat various skin concerns, such as improving skin tone and tightening. It works by emitting pulses of light that are absorbed by melanin or blood vessels. Unlike lasers, IPL uses multiple wavelengths, making it versatile for various skin types and conditions.

Dysport 10% OFF

Dysport is a cosmetic injectable used to reduce the appearance of wrinkles and fine lines, temporarily relaxing the muscles that cause wrinkles.

Dysport provides a smoother, more youthful appearance by reducing muscle activity that causes wrinkles.

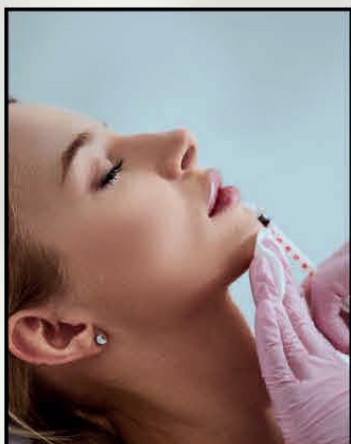

- Purpose: Smooth out dynamic wrinkles like frown lines (glabellar lines) between the eyebrows.
- Procedure: A quick, minimally invasive treatment where small amounts of Dysport are injected into targeted muscles.
- Duration: The effects typically appear within a few days and can last 3-4 months.
- Recovery: Minimal downtime; patients can usually return to normal activities immediately.

Filler - 15%OFF (1ML Syringe)

Fillers are injectable substances used in cosmetic procedures to add volume, smooth wrinkles, and enhance facial contours. They are commonly used for:

- Plumping Lips: Adds volume and shape.
- Smoothing Wrinkles: Fills in lines and creases, such as nasolabial folds and marionette lines.
- Enhancing Cheeks: Restores lost volume for a more youthful appearance.
- Jawline Contouring: Defines and sharpens jawline and chin.
- Under-Eye Hollows: Reduces the appearance of dark circles and hollows.

Red/Near-Infrared Package Giveaway!

When you purchase Dysport or Filler (1ml syringe) in the month of October, you will be entered into a drawing to win a ***Package of 3 Red/Near-Infrared Light Bed sessions!***
(Winner Announced November 1st!)

Red and Near-Infrared Light Therapy (RLT-NIR) is the practice of exposing the body to specific wavelengths of light that results in healing and reduction of inflammation at a cellular level.
